

N queens - Backtracking

Saturday, 14 February 2026 7:34 PM

4x4 chessboard :

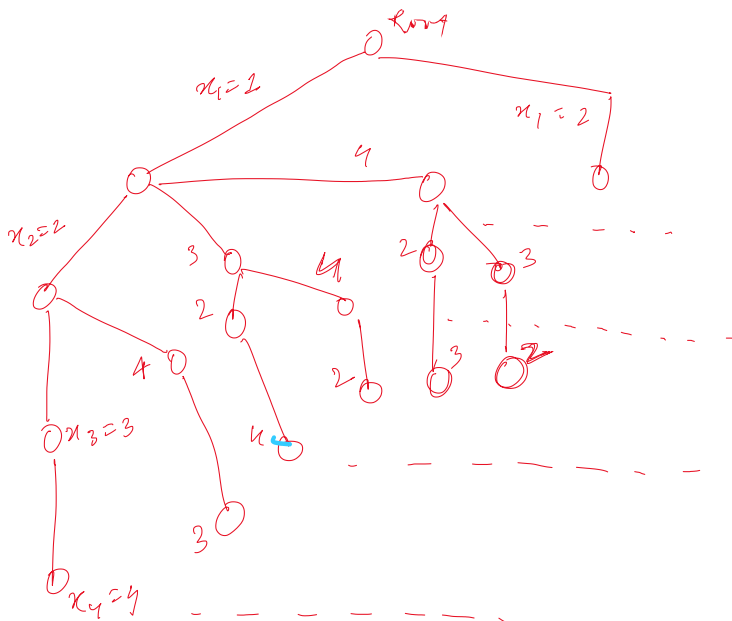

We have to place all the 4 Queens such that no 2 Queens are under attack.

They are under attack if they are in ^{went but} same row, same column or diagonal.

→ $16C_4$ ways we can place the 4 Queens.

→ Constraint : Q_1 will be in first row, similarly Q_2, Q_3 & Q_4 in respective columns.

State space tree

Solutions :-

Bounding function = ^{same} row, col, diag → x
